PROFESSIONAL SUMMARY

Fullstack Engineer with 5+ years of experience building reliable, scalable web applications across both frontend and backend. Experienced with TypeScript, React, Angular, Vue, Node.js, C#, and Python, with a strong focus on writing clean, maintainable code and solving real-world problems. Comfortable working with AWS and Docker, and experienced across the full development lifecycle, from designing and developing features to deployment and production support. I enjoy learning new technologies, collaborating with teams, and turning complex requirements into simple, practical solutions.

SKILLS

- | | | |
|---------------------|-------------------------------------|----------|
| • Typescript | • Next.js | • PHP |
| • Node.js | • Jira | • Kafka |
| • React.js | • Redux | • C# |
| • Angular | • Python | • Docker |
| • Vue.js | • Testing (Jest) | |
| • Git | • Database (firebase, MongoDB, SQL) | |
| • Agile development | • Amazon Web Services (AWS) | |
-

RELEVANT EXPERIENCE

Elekta Oy

May 2022 - Present

FullStack Software Engineer

- Developed and optimized an Electron.js desktop application using Angular and TypeScript, reducing application startup time by 30% and improving overall user experience
- Developed a persistent history-management system to store and retrieve users' previous activities, enabling users to access historical information across application sessions
- Implemented Kafka producers and consumers to publish, consume, and process business events across multiple services
- Implemented API logging and exception handling using to improve traceability of production issues and reduce troubleshooting time by approximately 35%.
- Developed API endpoints for user onboarding and access management using C# and Azure functions, ensuring reliable processing of user creation requests
- Debugged Azure Function executions using application logs and request data to identify failures in API integrations and user-creation processes
- Developed Python automation scripts to process and transform large datasets, reducing manual data-processing effort by approximately 40%

Druid Oy

April 2022-May 2022

FrontEnd Software Engineer

- Conducted a comprehensive React application audit, identifying code-quality, performance, security, dependency, and architectural issues and delivering recommendations that improved overall application quality by approximately 30%
- Built a dynamic Vue.js dashboard that consumed multiple backend APIs, implementing filtering, sorting, pagination, and real-time UI updates for large datasets

DroppX

Nov 2020-Feb 2022

FullStack Software Engineer

- Developed a Shopify purchasing integration using node that enabled customers to browse products, select items, and complete purchase workflows directly within Shopify storefronts
- Developed a React-based administration dashboard for a shipping platform, enabling internal teams to manage shipments, customers, deliveries, and operational workflows from a centralized interface
- Implemented role-based access and protected administrative functionality to ensure users could access only the operations relevant to their responsibilities
- Developed a Node REST API for dynamic shipping-price calculation based on delivery distance, shipment parameters, and predefined pricing rules, providing accurate quotes for customer orders

Globuzzer

Sept 2020 - Nov 2020

FullStack Developer Intern

- Implemented REST APIs for client onboarding, document management, case status updates, and application tracking, with validation and role-based access controls.
- Built and integrated backend functionality using Firebase (Firestore, Authentication, and Hosting)
- Assisted in developing and maintaining reusable React components for scalable frontend architecture
- Implemented real-time data updates to enhance user experience and application interactivity

EDUCATION

Metropolia University of Applied Sciences

Sept 2015-Dec 2019

Bachelor of Engineering, Electronics

Related Coursework: Communication Systems, Embedded Systems Design, Digital System Design, Data Structures and Algorithms, Microprocessors and Microcontrollers

Vaasa University of Applied Sciences

Aug 2014-June 2015

Bachelor of Science, Information Technology

Related Coursework: Web development, Javascript, Html and Css, Data Structures and Algorithms
